

International Symposium Confrontations in the Metropolitan Landscape

The Deltametropolis Association invites strategic policy makers, research professionals and landscape design practitioners to join the international discussion on metropolitan landscape planning.

Worldwide urban regions experience the pressure of urbanisation, energy transition, climate change and intensive agriculture on their landscape. Simultaneously, regions start to acknowledge the importance of a vital and attractive landscape as a key success factor in the global battle for talent. The question is, how to combine these increasing sustainability transitions with internal metropolitan demands, without loss of existing landscape qualities?

The International Symposium “Confrontations in the Metropolitan Landscape” will address these questions and offers a unique opportunity for people working in/with/for the metropolitan landscape to meet, extend knowledge, share experiences and learn from each other’s practice. Please join us on:

Friday September 8 2017
at Estate “Kleine Vennep” Haarlemmermeer
as part of the Landscape Triennial 2017
Participation fee 85 euro

Subscribe [here](#) before August 25

Keynotes

provisional program
final program available in August

Berno Strootman (governmental advisor landscape, NL) will outline the urgent matters and current practice of landscape planning on national level in the Netherlands.

Alan Pert (professor Melbourne School of Design) will share his experiences on metropolitan landscape planning in Melbourne and around Port Phillip Bay.

Kees Christiaanse (professor ETH Zurich and independent architect) will elaborate on the Haarlemmermeer situation where urbanisation, air traffic and landscape are closely intertwined.
